ABSTRACT OF THE DISCLOSURE

An electronic commercial transaction system, and a server, a user terminal and a record medium for the system, in which the user can purchase a commodity easily and receive a careful inspection and repair of the commodity conveniently. The server comprises a commodity data base, a dealing shop data base, commodity specifying program, dealing shop extracting program, and server side transmission for transmitting commodity data of a specified commodity, dealing shop data of an extracted dealing shop and an order sheet to the user terminal. The user terminal comprises a display for displaying the commodity data, the dealing shop data and the order sheet on a display surface, and user side transmission for transmitting commodity specifying information, destination information and order sheet input information to the server.
